contact@wobsta.de

Outline

- About the project, infrastructure etc.
- Look behind the scene
- Lessons learned

About Physics in Advent

- Online advent calendar for pupils, teachers, others
- Individual prizes as well as class and school prizes
- Questions at 5am, closing at 11pm, answers at 8am next day
- Initiator and coordinator: Prof. Dr. Arnulf Quadt (Göttingen)
- Started in 2013 (using some adopted PHP software)
- got involved in fall 2014 (ssl cert, archive, monitoring ...)
- Redesign + rebuilt from ground up in 2016
- Being project DevOp ever since

Noch 24 Experimente bis Weihnachten

Wir nehmen am "Fast Forward Science" Wettbewerb teil.

Physik im Advent

24 kleine einfache Experimente und physikalische Rätsel: ein Adventskalender der besonderen Art. Vom 1. bis zum 24. Dezember wird jeden Tag ein Experiment zum Nachmachen vorgestellt.

Tipp des Tages

Wenn es Fragen oder Unklarheiten zur aktuellen Aufgabe gibt, veröffentlichen wir hier Tipps und Hinweise. Es lohnt sich also, jeden Tag vor Abgabe Deiner Antwort nochmal den "Tipp des Tages" zu lesen.

Registrieren

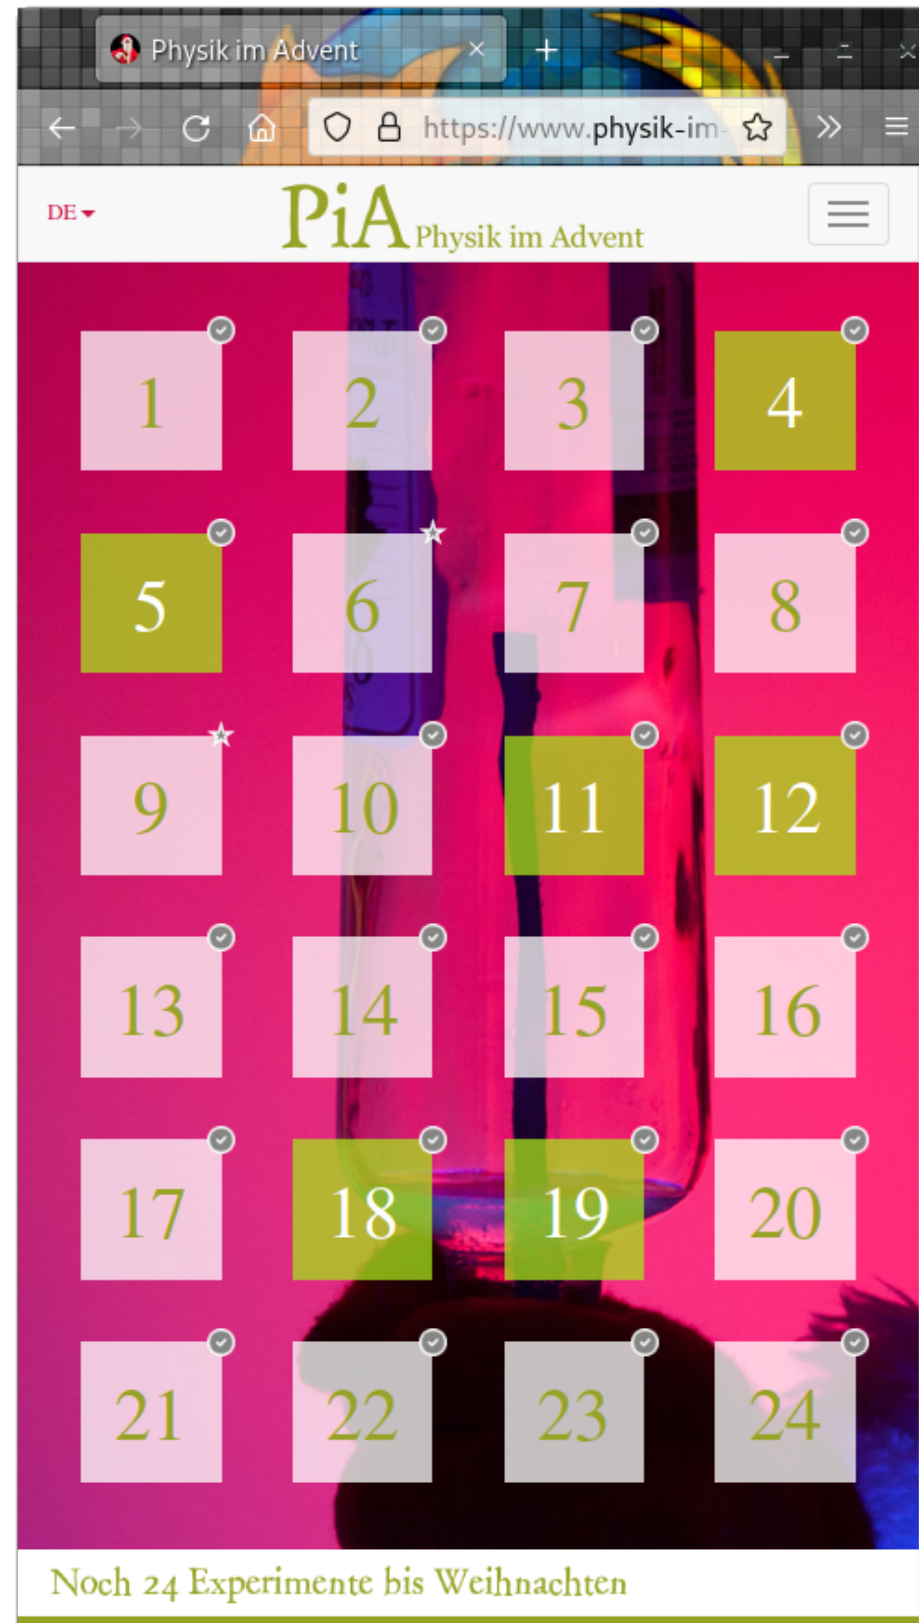

Für die Teilnahme an Physik im Advent musst Du dich jedes Jahr neu registrieren: Die Anmeldung für 2021 ist ab dem 1. November möglich.

Kontakt

Wir beantworten Fragen und nehmen Wünsche und Verbesserungen gerne auf. Sende Deine Nachricht einfach an das PIA-Team!

Infrastructure/Implementation

- Design by Aron Jungermann (also doing Flyers etc.)
- Responsive HTML using Twitter bootstrap
- Linux VM (Debian) at GWDG Göttingen
- Python (Flask) behind nginx and uwsgi
- Two instances (green/blue deployment with zero downtime)
- Postgres (with SQLAlchemy and Alembic)
- Video hosting at youtube (local hosting by mp4 videos for China)
- LaTeX (attendee certificates, class codes, prize letters)
- exim4 (without smarthost)
- git+gitlab (DPG), zabbix (wobsta), matomo (PiA), otrs+mailman (GWDG)

Cycle throughout the year

- (Summer: Video production)
- October: Archive of the existing instance (httrack)
- October: System and software updates
- October: New instance (new database, updated content and config)
- November: Registration
- December: Calendar
- Januar: Dice winners and send prizes
- February: Remove personal data, dump to excel

Behind the scene

- Public website just the tip of the iceberg
- Everything is english (incl. country names etc.)
- Every time/date is UTC
- No limit on user input (bad idea and revoked already, see conclusions)
- Let's have a look ...

Email:

Country:

Match (?):

Type:

Zombie:

Full matches the whole string, whereas start matches the beginning and anywhere matches at any position of the string. Fuzzy performs a full match but allows for a very few characters to differ. All those matchings are case-insensitive and spacing normalized whereas the exact match is strict in all details.

Monitoring

- Measure
- Report issues by triggers (email)
- Special events like Christmas mailing and download of certificates
- Monitoring has nothing to do with web statistics

Lessons learned

- Be fast, use real data or heavy test data
- High search engine rank without any SEO
- E-mail is troublesome
- There are always people having issues, complains etc.
- Form misuse by bots here and elsewhere (URLs as or in names etc.)
- Real people submit wired input, too (emoijs in names, mathematical double-struck digits in postcodes “ $\mathbb{1}\mathbb{2}\mathbb{3}\mathbb{4}\mathbb{5}$ ”, etc.)
- Maybe be more strict on accepting input?
- Asynchronous tasks may still harm (overload machine or block via the DB)
- Levenshtein (fuzzy match) fails on large strings (>100 characters)
- There are always new ideas

Thanks!
