

Getting away from cookbook labs with Arduino and smartphones

F. Bouquet and J. Bobroff

CNRS - Universite Paris Saclay

We developed in our university different laboratories classes to let students discover experimental physics methodology in an engaging and creative manner. Smartphones and Arduino boards are perfect tools to give students a large autonomy and to get the physics out of the classroom and put it back into the real world. I will present these classes and the different open resources we created to help other teachers giving these tools a try.
